The Wessex **MTC/MTX TRAILED COLLECTORS** are available as a sweeper collector or a paddock cleaner in both PTO or engine driven versions for use behind a small tractor an ATV or UTV.

As a sweeper collector, the machine is fitted with supple bristles for turfcare applications. Grass clippings, autumn leaves and other debris will be flicked effortlessly into the hopper without damaging fine turf. The paddock cleaner version is fitted with a row of sprung steel tines in front of the rotor which loosens stubborn muck. The rotor is fitted with a heavy-duty bristle for maximum efficiency in a paddock environment. When full, the hopper is rolled over by means of a hand-operated winch to leave a clean discharge onto the ground.
